ChatGrab and the Path to Continuity

From raw AI conversation to a reviewed, evidentiary record.

Gemini Notebook

The Continuity Framework

Start with the source. Keep the context.

Gemini Notebook

Phase I: Grounding – Capture the Conversation

Important Note: Capturing relies on public share links, which may make the conversation visible to anyone with the URL. Private session URLs cannot be captured.

Capture the source before building on it.

Gemini Notebook

Preserve Source and Provenance

Keep the original conversation entirely distinct from what you later conclude about it. Preserving exact relationships makes it easier to inspect a claim, revisit a correction, and recover the reason behind a human decision.

The original stays original.

Gemini Notebook

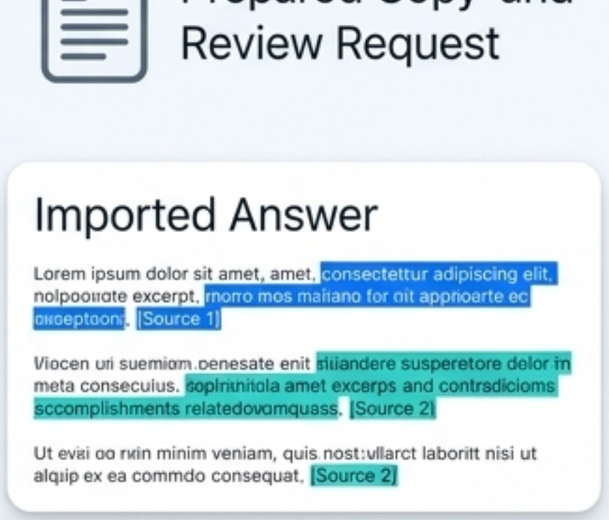

Phase II: Sensemaking – Contextual Analyses

True review requires explaining what a contradiction was about, distinguishing completed work from mere promises, and connecting recurring themes to their original messages. Review each finding directly against the source.

Input Criteria

- ☑ Conversations: A & B
- ☑ Review Categories: Contradictions, Accomplishments, Related Themes

Prepared Copy-and-Review Request

Note: Direct hosted API analysis is pending.

Find the meaning, not just the count.

Gemini Notebook

Understanding Chronological Evolution

Two differing statements are not necessarily a contradiction. Compare statements chronologically to ask what changed, why it changed, and whether the latest position is supported. Keep earlier versions visible instead of silently rewriting history.

Track the evolution, preserve the trail.

Gemini Notebook

Separate Claims from Reality

An evidence-minded review distinguishes between descriptions, artifacts, and demonstrated operations. A confident-sounding statement from an AI does not automatically become proof.

Representation

A feature can be described without existing.

Artifact

A file or interface can exist without actually working.

Behavior

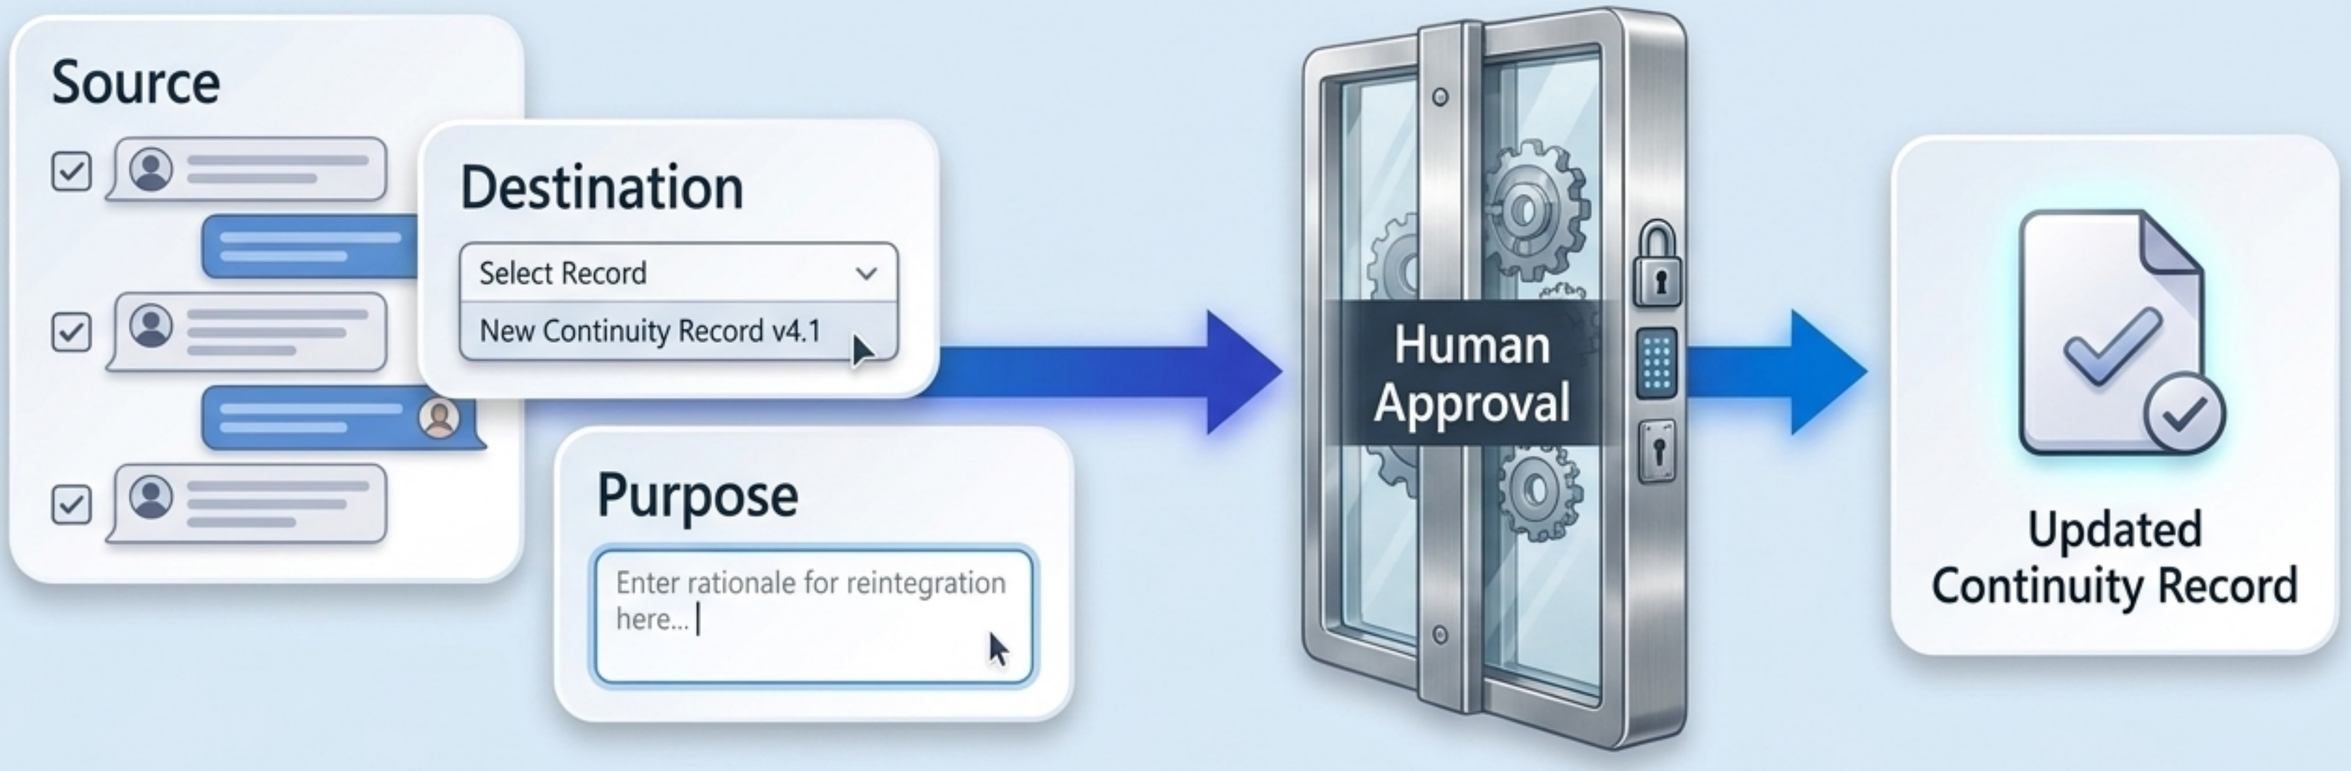

To establish behavior, the mechanism must perform under observation. Never pass without explicit documentation.

A claim is not a test result.

Gemini Notebook

Phase III: Application – Propose Reintegration

Reintegration is a deliberate proposal, never an automatic change. It answers three questions: What information? Into which record? And for what reason? Review references thoroughly before accepting anything.

Carry forward only what you choose.

Gemini Notebook

Put Continuity to Work

The same rigorous discipline supports distinctly different kinds of professional work. These are practical frameworks to evaluate, ensuring every advanced workflow retains a verifiable paper trail.

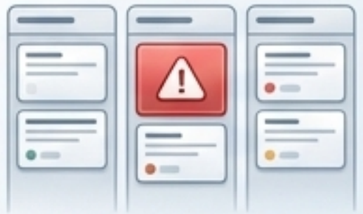

Engineering
Inspecting requirement changes.

Research
Comparing evidence.

Operations
Tracking unresolved work.

Knowledge Mgmt
Linking project records.

Governance
Tracking review decisions.

Documentation
Retaining idea origins.

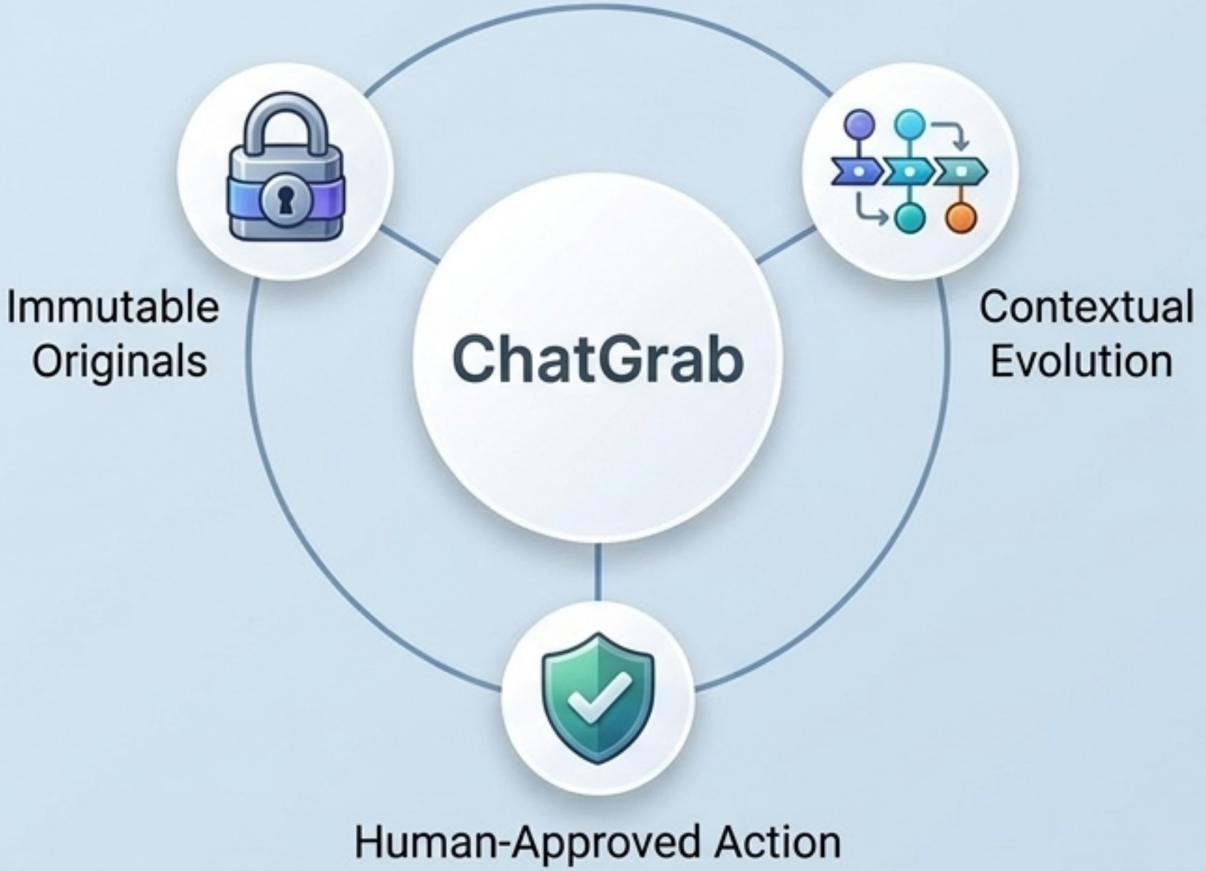

Useful continuity is inspectable continuity.

Gemini Notebook

The Evidentiary Standard

A discipline for the AI era. No matter how complex the work becomes, the evidence remains available for inspection.

Start with the source. Keep the context.
